\*The net expense ratio is lower than the gross expense ratio because certain fees have been voluntarily waived; this waiver may be terminated at any time. Absent such waivers/reimbursements the fund's returns would have been lower.

Performance data quoted represents past performance, which is no guarantee of future results, and current performance may be lower or higher than the figures shown. For the most recent month-end performance figures, please visit [vankampen.com](http://vankampen.com) or speak with your financial advisor. Investment returns and principal value will fluctuate and fund shares, when redeemed, may be worth more or less than their original cost. Figures shown assume reinvestment of all dividends and capital gains. Performance and expenses for other share classes will vary. Expense ratios are as of each fund's fiscal year end as outlined in the fund's current prospectus.

**Risk Considerations:** There is no assurance that a mutual fund will achieve its investment objective. Mutual funds are subject to market risk, which is the possibility that the market values of securities owned will decline and that the value of the securities may therefore be less than what an investor paid for them. In addition, investments in foreign markets entail special risks such as currency, political, economic, and market risks. The risks of investing in emerging-market countries are greater than the risks generally associated with foreign investments. Concentration in a particular industry, sector, country, or region can increase the strategy's vulnerability to the industry, sector, country, or region and/or regulatory development. As a result, the fund returns may be considerably more volatile. When investing in value securities, the market may not necessarily have the same value assessment as the manager, and, therefore, the performance of the securities may decline. Accordingly, an investor can lose money investing in a mutual fund. It is not possible to invest directly in an index and these returns do not reflect any sales charges or fees that would be paid by an investor purchasing the securities they represent. Such costs would lower performance. Index returns assume reinvestment of all distributions. Indexes are unmanaged.

\*The net expense ratio is lower than the gross expense ratio because certain fees have been voluntarily waived; this waiver may be terminated at any time. Absent such waivers/reimbursements the fund's returns would have been lower.

Please consider the investment objectives, risks, charges and expenses of the fund carefully before investing. The prospectus contains this and other information about the fund. To obtain a prospectus, contact your financial advisor or download one at [vankampen.com](http://vankampen.com). Please read the prospectus carefully before investing.

**Risk Considerations:** There is no assurance that a mutual fund will achieve its investment objective. Mutual funds are subject to market risk, which is the possibility that the market values of securities owned will decline and that the value of the securities may therefore be less than what an investor paid for them. Fixed-income securities are subject to credit risk, which refers to the ability of an issuer to make timely payments of interest and principal, and interest-rate risk, which refers to fluctuations in the value of a fixed-income security resulting from changes in the general level of interest rates. In a declining interest-rate environment, the funds may generate less income. In a rising interest-rate environment, bond prices fall. Accordingly, an investor can lose money investing in a mutual fund. It is not possible to invest directly in an index and these returns do not reflect any sales charges or fees that would be paid by an investor purchasing the securities they represent. Such costs would lower performance. Index returns assume reinvestment of all distributions. Indexes are unmanaged.
